Art Unit: 1731

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-16, 21-29 and 38-46 are rejected under 35 U.S.C. 103(a) as being unpatentable over OULIE et al or GREENWOOD in view of PROUGH or RICHTER or S. U. 1,252,415.

OULIE et al or GREENWOOD teach a filtrate addition system having a header and individual nozzles for adding filtrate into a blow dilution zone and controlling the header and the individual nozzles, e.g. see controller (45) of GREENWOOD and controllers (8,9,10) in OULIE et al. PROUGH or RICHTER or S. U. 1,252,415 teach using measuring devices to aid in controlling the amount of filtrate flowing through headers and nozzles in a digester dilution zone. It would have been obvious to use the measuring devices of PROUGH or RICHTER or S. U. 1,252,415 to aid in controlling the filtrate in the header and individual nozzles of OULIE et al or GREENWOOD. It would have been obvious to use any well-known measuring device in measuring the filtrate flow of GREENWOOD or OULIE et al. The use of two header assemblies would obviously provide better control of the filtrate than one.

Claims 7-16, 21-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over OULIE et al or GREENWOOD in view of PROUGH or RICHTER or S. U. 1,252,415.

If necessary the use of two sets of dilution headers/nozzle assemblies is taught by SHERMAN et al. It would have been obvious to use a plurality of header/nozzle assemblies for better consistency and chemical control throughout the digester.
